

SOCIOMETRICS PROJECT No. 12

CREATION OF THE MICROCOMPUTER VERSION OF THE 1985 NATIONAL HEALTH INTERVIEW SURVEY PERSONAL RECORD

This project produced: (1) a machine-readable microcomputer extract of the National Center for Health Statistics' 1985 National Health Interview Survey Personal Record and Health Promotion and Disease Prevention Supplement; (2) machine-readable SPSS/PC and SAS/PC statements to read the raw data and create an SPSS/PC or SAS/PC analysis file; and (3) a printed user's guide and training manual to accompany the machine-readable files. The National Center for Health Statistics (NCHS) tested the usability of the product at various universities and professional conferences across the country. A follow-up project (Sociometrics Project No. 14) explored the possibility of developing the product further for commercial publication.

Sponsor: The National Center for Health Statistics
 3700 East-West Highway
