

## **SOCIOMETRICS PROJECT No. 15**

---

### **CREATION OF STANDARD TABLES OF NATIONAL ESTIMATES OF HEALTH PROMOTION/DISEASE PREVENTION STATISTICS**

This project prepared a set of standard tables of national estimates of health promotion/disease prevention statistics from the 1985 National Health Interview Survey, suitable for use in model-based estimates. A user-friendly manual was also produced with step-by-step instructions on how to compute estimates based on various models (e.g., population standardized adjustments, regression, and composite) as well as worked-out, realistic examples of applications of the methods.
