

## SOCIOMETRICS PROJECT No. 112

---

### SANTA CLARA COUNTY DEPARTMENT OF PUBLIC HEALTH EVALUATION FRAMEWORK DEVELOPMENT PROJECT

Project 112 focused on the development and implementation of a comprehensive program evaluation plan for the Santa Clara County Public Health Department's diverse collection of programs and services. A conceptual framework for public health evaluation was developed in Phase I to guide the development of program-level evaluation protocols and to support conclusions about overall departmental performance. The framework was based upon the Center for Disease Control and Prevention's public health standards, titled *Ten Essential Services of Public Health*. In Phase II, customized workshops were delivered to staff and intensive technical assistance was provided to help the seventy-five individual programs that make up the Department to operationalize their evaluation plans.
