EVALUATION SERVICES ON BEHALF OF THE TEEN PREGNANCY PREVENTION INITIATIVE OF PLANNED PARENTHOOD GOLDEN GATE

Sociometrics provided evaluation services in support of PPGG's Teen Pregnancy Prevention Initiative (TPPI), funded by the Hewlett Foundation. The program aimed to increase teen access to services at PPGG health centers through the development and implementation of a comprehensive strategy that addresses key organizational issues that limit their ability to most effectively provide teens with the services and resources they need to successfully prevent unintended pregnancies and STIs. Specifically, PPGG achieved their goal by planning, implementing, and evaluating a staffing model that focuses around changing the compensation and staffing structure at PPGG health centers to ensure that when teens want to access their services they are available, and taking actions to ensure that their health centers are open during teen-friendly hours and welcoming for teens.

Specific activities for Sociometrics' staff included a) drafting of evaluation plan including methods and data collection procedures b) technical assistance with data collection and data entry c) analysis of data and d) writing of periodic reports and final report.
